The files in this folder can be used to create the webcam mount for Tilescape's tabletop. It is entirely constructed from laser cut shapes out of 6mm wooden sheets. All shapes are included in a single file for laser cutting these shapes in different formats (.dxf, .pdf, .ai). In addition, one .pdf file has annotations in it that align with the numbers shown in the figure to the right.

Once all shapes are cut, the self-align and can be glued together. The exception to this is parts number 6, which are screwed to the middle of the 4_cross_beam_mount_x2 and are used for correct positioning when placing the assembled webcam mount (see figure of full tabletop system). No further finishing of the shapes is required.
